Adrian Grahams I antenna 2 Image of life Vanaga by Fotolia.com Television antennas need a clear and unobstructed view towards the television transmitter to collect strong signals, so it is important to choose your antenna high enough from the ground level to achieve this goal. Always position the antenna far enough to eliminate neighboring obstructions, such as buildings and trees. In most cases, a TV antenna on the roof mounted firmly and attached to the gutter of your home will receive a strong signal to ensure that your television image is clear and stable. If you don't have a clear line of the TV transmitter view from your roof from your roof, you may need a longer tree to increase the height of the antenna, but never install a more than 6 feet antenna over the Assembly bracket. Another option in poor signaling areas or to receive distant TV stations, is a "long-range" or amplified antenna to improve reception. In some isolated places, or shielded by television transmitters from hills or mountains, you may need an amplified antenna raised at a considerable height to get any chance to receive terrestrial digital television signals. In this case, it is worth considering alternatives such as cable television or digital satellite television, since the cost of installing a TV or antenna tower with the boy's wires can be considerable in comparison.
