Next

Short code	What it does
#004#	Cancel call forwarding to voicemail (prevents new voicemail messages)
**21*1+PhoneNumber#	Turn on unconditional forwarding (CFU) to a number (prevents calls to your number)
#21#	Turn off unconditional forwarding
#31#1+PhoneNumber	Show name and number on outgoing calls
*31#1+PhoneNumber	Hide name and number on outgoing calls
**61*1+PhoneNumber#	Turn on forwarding if no reply (CF NRY) to a number (unanswered calls ring to alternate number)
#61#	Turn off forwarding if no reply
**62*1+PhoneNumber#	Turn on when not reachable (CF NRC) (unanswered calls ring to another number when device is off or out of signal range)
#62#	Turn off call forwarding when not reachable
**67*1+PhoneNumber#	Turn on call forwarding when busy (CFB) (occurs if receiving a call while dialing out)
#67#	Turn off call forwarding when busy
61*18056377243seconds#	Change call forwarding delay time. Choose a 5, 10, 15, up to a 30-second delay. For example, dialing **61*18056377243**10# would be a 10-second delay.

I don't know the system in particular, but I'd start to diagnose the flow of calls. Configure a DID to play the forwarding message, but then transfer to an extension of the normal way. Are you going to reach the extension? If not, there is a problem a with the DID call flow > message -> > > > > The next place to look is that, in the case of an external call, the system may be trying to establish a connection between the external call and the routing number. In other words, it is not acting like a relay where the received call goes to the pbx and then it "repeats" that to a different number. The work of the PBX is to establish the session between the final two points and then leave. Okay, I have to work. I was missing an adjustment. 21-03-01 (Trunk Group Routing for Trunks) had to be adjusted to 1 in all modes. The other settings I had already placed in place were: 14-01-13 (Trunk to Trunk Transfer) had to be activated on all exterior/stock lines. 20-11-12 (Call Forward Off-premise) had to be enabled for the service class which is set for extensions (1, in my case), 20-07-05 (Trunk Automatic for Trunk Transfer) was set for the service class 1. I also used the 15-07 setting for a function key for "10 - Call Forward Immediate" to give an indication of when the forwarding is switched on. Now I can enter the program on each phone and set up the call to forward all calls to forward to any internal extension or external number. He came here with the same problem and that worked out. Thank you for documenting it! after you fixed it! Thank you for documenting the solution! It's working! Mobile client UNIVERGE ST450 Mobile client for Android The advanced smart client for your Android phone The ST450 allows you to set up and clear your call forward. To configure and enable call settings forward youknow the right access codes to dial- these can be obtained from the administrator of your telephone system. 1 From the keyboard screen, enter the access c o de (you will need to get this from the administrator of your phone system). 2 If Access sequence requires a target number, indicate the number. 3 Tap the green button on the phone to answer the call. As an example, if your busy call-ahead dog was *2 and you wanted to forward to your voicemail (extension 1234) your type *21234 then click on the green phone button. You need to enter the number you are calling forwarding the same way you would dial from your desktop phone, so you will need to dial a 0 to access a n external line. For example, to dial Austrian NEC (131 632) you would need to enter 0131632. To dial an internal extension, simply enter the number of extensions. Learn more.152Bae124 Download 152;Laure124; Brochure NEC DSX business phones offer a healthy © exceptional features, including Call Forwarding. The call Forwarding can be useful for those who may not always be around, since it ensures that user call s are covered when they are away from their work. Sending calls on commercial phones NEC DSX allows an extension user to redirect his call to another extension. Call Forwarding types are: Call Forwarding When Not Answered ringing the forward extension when not answering. Call Forwarding When Busy or Not Answered Calls ringing the extension forward when no answer is available, and all forward calls while the extension is busy. Call the Immediate Fire Advance, all calls to the extension immediately. You can configure Call Forwarding to redirect all calls or only external calls. If an extension with defined routing to external calls only receives a traced transfer, the initial voice transmissions in the extension. When the interlocutor shuts down to complete the transfer, the external call to the front a s scheduled. Call Forward Chaiming Extension user ahead can chain call forwards. for example, the 301 extension can transmit all calls immediately to 304, which in turn can forward all invitations immediately to 302 extension. So, any coworker who calls 301 u 304 goes to 302. if extension 302 is call forward to mailbox, thenFor 301 or 304, go directly to 302Security Mailbox. Cancel Cancel Closure Call Cancel Closure allows a keyset user to dial a call box simultaneously to cancel the entire call forwarding system. The extension should have access level 4 or 5 configured a priori@consult your System Administrator for more information. Call the Lock Key A key user can have a key in their phone or DSS Console designated as the routing key for calls. While extension © inactive, press the key puts the extension in program mode Call Forwarding a priori@the same as pressing INTERCOM and dialing *3. If the extension has Call Forwarding enabled, and the user presses the key and waits (at least six seconds), Call Forwarding © automatically canceled. If the extension has the call Forwarding disabled, and the user presses the key and waits (at least six seconds), the previous call forwarding mode © automatically enabled (if any). While the extension is busy, pressing the key switches on and off the routing call. Call Forwarding Key BLF Flash Rate: Off to Newman Forwarding © disabled. The extension is in call forward programming mode. Slow Flash as it moves © Enabled in extension. call Forwarding Toggle In A Personal Speed Dial Bin If a n extension is not available from Key Feature for a call forwarding key, the user can program a number of personal speed markers for a similar operation (without BLF). To do this: While you are on the hook, dial Baa35; 77. Press the key for the number of personal speed dial you want to program +HOLD. For LINE/GRP/ICM, press INTERCOM +HOLD. For NUM, dial *3 +HOLD. For NA, enter a name of your choice +HOLD. Press the speaker to come out. While extension © inactive, pressing the key puts the extension in programmable mode Call Forwarding a priori@the same as pressing INTERCOM and dialing *3. If the extension has Call Forwarding enabled, and the user presses the key and waits (at least six seconds), Call Forwarding © automatically canceled. If the extension has called disabled, and the user presses the key and waits (at least six seconds), the forwarding mode of the previous Call is automatically enabled (if any). Users of the forwarding confirmation keys will hear a single confirmation signal after activating or canceling the Forwarding call. Single-line phone users will hear dial tone Intercom after Call Forwarding is authorized or cancelled. And that depends on what you need to know about Call Forwarding on NEC DSX commercial phones. For more information, see your System Administrator. For a vast selection of NEC phones and other telephone systems and equipment, visit Startechtel. with or call 800-564-8045. You can also connect with us on Facebook, Google+, Twitter, LinkedIn and Pinterest.
