A few days ago, another update for the carrier's OS services was released, which, however, had fatal consequences for some users. Due to the mountain bus, several manufacturers encountered a bug, which also led to a battle over the SMS functionality of the affected Android smartphones. SMS is not sent, but not received. Google would stop updating and rebuilding. Affected users can also uninstall the latest app updates themselves, which is possible in the app area of the system settings. The fewer users miss sending SMS, the more difficult it is in the era of SMS-Tan, multi-factor authentication and others. to avoid receiving SMS. Operator services, what exactly are they? Operator services allow mobile operators to provide up-to-date communication services, including Accu optimization and support for advanced features in the Messages app for Android. Via TD with links marked with * affiliate links. In Käufen we receive a commission. Carrier Services - What is this app hiding and what does it do? When a message appears on the screen of the smartphone used about certain applications and their updates, the person's owner usually knows which program it is. If not, then it becomes suspicious and thus doesn't want to allow unknown contents to infiltrate and spread in the device. To keep users up to date, the following article explains what OS carrier services are and whether they can be installed safely. What does the program actually do? The following post is available on the app's Google Play Store page: Operator Services enables mobile carriers to provide up-to-date communication services, including billing and support for advanced features in the Messages app for Android. So it is an application which, in addition to news, manages other communication services on the device and also improves battery benefits. This means that the program poses no detectable danger. But behind the codes lies the secret of the codes and the way the app performs its functions. Courier service/RCS or Whatsapp? At this point, readers, readers, it would be clear that the acronymThe update of the so-called transport services was released only a few days ago, but it had fatal consequences for some users. Several manufacturers have encountered a bug that disables the SMS feature on affected Android smartphones. SMS could not be sent but not received. Google is said to have stopped the update a long time ago and rolled it back. Affected users can also uninstall the latest app updates themselves, which can be done in the Apps area of System Settings. In the age of text messaging, multi-factor authentication, etc., it's much harder to do without SMS. Why transport services? Carrier Services enables wireless carriers to provide the latest communications services, including: battery optimization and advanced messaging support for Android. AP links marked with * are affiliate links. This is how we get a commission from the purchases made. Carrier Services - What does this app hide and what does it do? If a message about certain apps and related updates appears on the screen of a used smartphone, the owner of that app usually knows what type of app it is. Otherwise, it becomes suspicious and therefore does not want to allow unknown content to be terminated without any problems. In addition to the individual service providers' tariff campaigns, it is responsible for combined offers and packages with mobile phones and smartphones. Meanwhile, mostly in the home office, but still productively. Apple fanatic. If I missed any process, send me the letter. Z o. He. Connection Robokiller Teltech Systems, Inc. If you are buying your cell phone in the global smartphone market from manufacturers such as Samsung or Huawei, not Apple, you will avoid Android. You probably have an Android device yourself and you probably watch more than you think and watch. As an Android user, you have to fight for privacy and data protection - then you will take a closer look at some features. to buy. If you don't always want to watch, you won't find many default settings on your phone. Most of the data is used by Google Group, one of the largest voters in the world, properly developing and licensing Android. Most programs that make everyday life using Android such practical are from Google: Maps, Play Store, Gmail, Calendar, Chrome Browser and, of course, search engine. Manufacturers, Google services apply strict rules that sell Android only to Android. From a purely technical point of view, it will be quite possible to restore the operating system from Google Effect. For this reason, July 18th. The EU imposed a fine on the group for using Google Android to illegally increase its negotiation power. In the future, mobile phone companies' rights will be enhanced if they decide to refuse Google services. As an Android user, you can ask yourself this question:Does the mobile phone not provide accurate movement profile in all places you have ever visited with your mobile phone? Does Google really protect all previous stories for searching and displaying the program? Don't have an audio file with all the voice commands you have ever talked to your mobile phone? Not all of these features are enabled by default, but sometimes this is a sufficiently accurate confirmation window to start collecting data backgrounds. The good news is that you can disable this and other observation methods. At least if you know where the settings menu was removed. Data collection is not a direct threat. Like Facebook, Google uses personalized advertising among other things. Google has never had a data scandal like Facebook. Even with hackers and criminals, companies like Google Data are relatively safe. Google's image and profit would be a disaster if the data were taken in the third part of the hand. Google data collects the treasure of you that makes the company so valuable. However, if you want some data to be available, you need to actively adjust the confidentiality settings. By doing these eight activities, you will reduce your Android smartphone for privacy. We tried it with Android 6.1 Samsung Galaxy S5 Neo and Android 6 using TP-Link Neffos Y50. Occasionally, clicks are slightly different because there are many different versions of Android, and smartphone manufacturers can also edit the operating system themselves. However, anyone with an Android phone is worth checking these eight features.1. Local History: Your pocket has an observation tool. Profile of the main motion Council in Majors: Screenshots In Google Time, anyone who activates local local history on Google Maps can find useful suggestions, such as. B. the situation of traffic every day to work. Together, the mobile phone becomes a permanent tracking device that allows Google to create your profiles. With Google History, you can watch within minutes and measure the year you were away and where you have been: including vacation trips, work, trips to supermarket, friends, friends,novels. You can check if Google creates motion profiles for you following this link. Anyone who has this feature enabled and wants to get rid of it should take a long long-click road. Turn off location chronology: Settings > Google > Account Google > Data & Customization > Location Chronology > Use Location Chronology > disables the "Off" slicing device. Points > Settings icon > Remove all chronology from positions. Application Solution 2: Revokes the license of the monitoring application. Application applications can only be activated and deactivated separately. Image: Screenshot | Android application developers can choose what to allow and what to deploy to their applications. You can even program a harmless listening application to recognize your position and read your address book. When installing a new application, you must first accept all these authorizations or not download them at all. You have more options compared to the apps permissions in the Settings menu. Each installed application has different authorizations that can be enabled or disabled using a slider device. However, it is not designed to be very intuitive. It is not possible to minimize all application permissions with a click of a button. Each installed application must be controlled individually. Settings > Applications > Application Management > Single Application > Resolution > Select cursor on "OTKL". 3. Ads: Check your advertising profile and avoid a personalized advertising profile, which may contain dozens of posts Image: Screen Screen | When you use Google Products in Googlepok, the company creates an advertising profile based on your interests and preferences. For example, if you have your Google account in the browser, the company can rate all your research. This creates a list of interests that can contain dozens of votes. Depending on your viewing habits, your advertising profile will be more or less detailed. Motherboard publishers' interests identified by Google included "computer and electronics", "computer and video games" and "IT equipment". You can check your personal advertising profile at this link. That is, Google creates such an advertising profile, you cannot disable it at all. But if you get personalized ads based on your profile. You can find more tips for anonymous browsers. Settings> Google> Display> Disable Personalized Ads 4. Find My Device: Google Password is all you need to remotely connect your Android mobile phone, call the door and call an image: screenshot | Googleze's feature is both convenient and risky: Google helps you find an Android device if you have moved or lost it. Using a mobile connected Google Account password, the device can already be found, at least when it is on. You are very grateful for this feature. Negative side: If someone finds out the password for your related Google accounts, he can find you forever and press your data button. The scenario is unlikely. Just sign in to your computer using your Google Account, for example, check your email, mail and forget about applying. Then any user who calls the location link can access your mobile phone. Everyone decides whether to "find my device" is worth it. The function is active at the factory. Settings> Google> Security> Find My Device. Automatic backup You may copy more data than you want on foreign servers devices. The menus of our two test devices also differed. The Samsung S5 Neo data backup includes "WLAN password, bookmark release" and "Other application settings and data". Google also provides the date, time, meeting and WLAN pass.He will do it. If you always want to know exactly what data is copied to third-party servers, disable this type of this type. Really important stuff like contacts or photos can also be manually backed up and then stored on a separate hard drive. Settings > Backup & reset > Back up my data > z slider 6. Active: Google brings a book to your searches and video calls in a minute. Image: Screenshot of Google Manandroid Google has a great knack for selling user data as useful services. For example, there's the My Active feature, which Google describes as "discover things you've already searched for, read, or watched," saved by your connected account. So you can find out which bus stop you searched on Google Maps about three years ago, or which music video you left on YouTube last summer. It's up to each individual to decide if "Doing It Again" is worth watching. During our tests, we found that the motherboard vendor was also unknowingly enabling these features on their phone. To disable the above settings, all three sliders must be set to Output. Settings > Google > Account > Data & Personalization > Active Settings & Active UK App > Disable Seberger > Google > Google > Data & Personalization > Representative Settings > YouTube Search Gradient > SLieberger on Disable Settings > Google Google Google > Google Account > Data & Personalization > Active Settings > YouTube History > SLieberger From 7. About exercises: Contacts, Music, App and Meeting - google.The picture first thought: screenshot | "Information about Androidrter equipment" is probably spontaneously implemented by elements, such as a mobile phone model or a version of the operating system. Nevertheless, Google means your contacts, your calendar, your applications, your music and your technical information on your mobile phone, for example. B. Acute, as the group explains on the help page. Google also wants this information. "With this information, Google can provide you with more detailed results and proposals," he said as a greeting on the help page. "If you ask Google to contact the contact, Google can provide you with the best results in your contacts," he said. This is not similar to the characteristics of the megates, whom everyone was waiting. For example, if you prefer to press your contacts in a telephone catalog, you can do without collecting permanent data. Collection Information: Settings> Google> Google> Database and Personalization> Active Parameters> Information on the device> SLieberger on "De Personalization> Active parameters> Action> Three points -symbol> Delete 8. Audio: Audio: Audio: Audio: Audio: Audio: Audio: Audio: Blocked your vocal commands from Google Past, save records of these voice commands | Illustration: Google's recording in Google is practical and avoids click: just talk to the microphone what you want. Very few users probably admit that the recorded voice commands can be recorded in a huge archive on Google servers. By this link, you can check if you agreed with sound notes. If you do not need it or not, you must penetrate deep into the settings to deactivate. Language and audio dependence assume: Settings> Google> Google Account> Data and Personalization> Active Parameters> Language and sound actions Personalization and personalization and personalization, as well

as active time and mirror of time> My activity> After! Product filtering> All products> sound and sound> ä bernhomen> Three-point symbol> Löschen> Löschen motherboard also causes 150 EUR monitoring, support pages always show practical benefits on support pages. But if you look at the Android man, a different picture emerges. It is very easy for users to accept the data collection feature and they often like to click on the colored surface of the pop-up window. So if you want to close such a feature again, click on the roads to 13 stations for a long time in the irrelevant menu. It is unlikely to do this for a large number of users. Of course, collecting a lot of data from many people is of great interest. To play people. In fact, Google spends a lot of money on data protection, but also because of its self-sufficiency: data leaks not only have a marketing disaster, but also require Google's business model. The more information you have about your users, the more the group can sell so that Google employees don't have to worry about your observation or secrets. On the contrary, the problem is that your data is more than the power of the group in the market, it is stuck. Behind it is a newly controlled marketing firm such as World Cambridge Analytica. For example, in China, a government system has been established to assess the population according to online activities: therefore, users receive individual points. When low scores become socially disadvantageous, new types of discrimination and control can occur. However, such scenarios in this country are speculative and against the relevant regulations. Google data is unquestionably strategically valuable: New products like Google's smart assistant Siri, a rival product, are practical and useful if you're just focused on datathey can combine their users. The Google group would probably have a large disadvantage compared to the competition in the development of new products, it would not collect big data. gather.
