## Install net framework 4.5 from command prompt

Steps Open a command prompt with administrator user rights (Run as Administrator). To install .NET Framework 3.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive, use the following command: DISM /Online /Enable-Feature New York 1.5 from installation media located on the D: drive New York 1.5 from installation media located on the D: drive New York 1.5 from installation media located on the D: on Windows 10 using command prompt? Install . NET Framework 3.5 using the command prompt or PowerShell as Administrator. Also, how do I install .NET 3.5 on Windows 10 using CMD? NET Framework 3.5 using Command Prompt, follow these steps: Press Windows key and R at the same time. Type cmd in the Run dialog box and press Enter. And enter the following line in the Command Prompt: DISM /Online /Enable-Feature Name: NetFx3 /All /LimitAccess /Source:X:sourcessxs. In this way, how do I install .NET framework? Note: The same steps work for Windows 8 and Windows 10. Click Start -> Control Panel. Click Programs. Click Turn Windows 10. Click Start -> Control Panel. Click Programs. Click Turn Windows 10. Click Start -> Control Panel. Click OK. Wait for Windows to complete the operation. Why Net Framework 3.5 is not installing? That's it. Now try to install . NET Framework 3.5 again using Control Panel -> Programs and Features or by using DISM command in RUN dialog box or Command Prompt to refresh policy changes and restart your computer. ×Sorry to interruptCSS Error View Original X By: Support Issue: How to remove and reinstall the Microsoft .NET Framework in order to correct a problem with Autodesk software, such as a "general failure" during installation (due to a conflict with installer prerequisities) or any type of misbehavior or crash during normal operation. Environment: Windows only. All other operation systems are not using .NET Framework cannot be uninstalled on Windows 8 and 10. Because of this the preferred method is to repair .NET Framework and to run the System File Checker. It can be removed from Windows 7 and older systems. It will show up in Programs and Features (Add or Remove Programs for Windows XP) amidst the list of installed programs. This is the preferred method for Windows 7 and older systems. Download and run the Microsoft .NET Framework Repair Tool. Additionally, run the System File Checker: Click the Windows Search button in the status bar and type in CMD. Right-click cmd.exe and choose "Run as administrator." Type in the command: SFC /SCANNOW. Wait for it to finish. Test the system after this to see if the problem is resolved. For older Windows operating systems: Open Programs and Features from the Windows Control Panel (or Add or Remove Programs for Windows XP). An easy way to bring this up on non-Windows XP systems is to type "programs and features" in the search field at the bottom of the Start menu. Uninstall everything that starts with "Microsoft .NET" as an installed program. Looking at "View installed updates" in Programs and Features in Windows 8 and 8.1, it may be possible to find the corresponding KB number and remove it that way. Windows 7: To reinstall the Microsoft updates installed, it may be possible to install the latest .NET Framework. Current updates include .NET Framework updates. The current .NET 4 includes all prior updates for version 4. The .NET 3.5 SP1 includes 2.0 and 3.0. The earliest .NET 1.1 is no longer supported. Only very old Windows systems and software need it.
